

Long-form selection fixture & section 1

Page 1 of 24 - Reeda Test Fixture

This dense, multi-page fixture is intentionally ordinary prose. It exercises selections across several visual lines, varying widths, page boundaries, and repeated text fragments without relying on a single bounding box.

Readers may zoom, resize the reading pane, move between pages, and return later. An annotation must therefore keep page-relative geometry rather than coordinates from one particular browser viewport.

The quick brown fox jumps over the lazy dog while a longer research sentence continues through a line wrap to make underlines, highlights, and strikethrough annotations easy to inspect.

Long-form selection fixture â section 2

Page 2 of 24 - Reeda Test Fixture

This dense, multi-page fixture is intentionally ordinary prose. It exercises selections across several visual lines, varying widths, page boundaries, and repeated text fragments without relying on a single bounding box.

Readers may zoom, resize the reading pane, move between pages, and return later. An annotation must therefore keep page-relative geometry rather than coordinates from one particular browser viewport.

The quick brown fox jumps over the lazy dog while a longer research sentence continues through a line wrap to make underlines, highlights, and strikethrough annotations easy to inspect.

Long-form selection fixture â section 3

Page 3 of 24 - Reeda Test Fixture

This dense, multi-page fixture is intentionally ordinary prose. It exercises selections across several visual lines, varying widths, page boundaries, and repeated text fragments without relying on a single bounding box.

Readers may zoom, resize the reading pane, move between pages, and return later. An annotation must therefore keep page-relative geometry rather than coordinates from one particular browser viewport.

The quick brown fox jumps over the lazy dog while a longer research sentence continues through a line wrap to make underlines, highlights, and strikethrough annotations easy to inspect.

Long-form selection fixture â section 4

Page 4 of 24 - Reeda Test Fixture

This dense, multi-page fixture is intentionally ordinary prose. It exercises selections across several visual lines, varying widths, page boundaries, and repeated text fragments without relying on a single bounding box.

Readers may zoom, resize the reading pane, move between pages, and return later. An annotation must therefore keep page-relative geometry rather than coordinates from one particular browser viewport.

The quick brown fox jumps over the lazy dog while a longer research sentence continues through a line wrap to make underlines, highlights, and strikethrough annotations easy to inspect.

Long-form selection fixture â section 5

Page 5 of 24 - Reeda Test Fixture

This dense, multi-page fixture is intentionally ordinary prose. It exercises selections across several visual lines, varying widths, page boundaries, and repeated text fragments without relying on a single bounding box.

Readers may zoom, resize the reading pane, move between pages, and return later. An annotation must therefore keep page-relative geometry rather than coordinates from one particular browser viewport.

The quick brown fox jumps over the lazy dog while a longer research sentence continues through a line wrap to make underlines, highlights, and strikethrough annotations easy to inspect.

Long-form selection fixture â section 6

Page 6 of 24 - Reeda Test Fixture

This dense, multi-page fixture is intentionally ordinary prose. It exercises selections across several visual lines, varying widths, page boundaries, and repeated text fragments without relying on a single bounding box.

Readers may zoom, resize the reading pane, move between pages, and return later. An annotation must therefore keep page-relative geometry rather than coordinates from one particular browser viewport.

The quick brown fox jumps over the lazy dog while a longer research sentence continues through a line wrap to make underlines, highlights, and strikethrough annotations easy to inspect.

Long-form selection fixture & section 7

Page 7 of 24 - Reeda Test Fixture

This dense, multi-page fixture is intentionally ordinary prose. It exercises selections across several visual lines, varying widths, page boundaries, and repeated text fragments without relying on a single bounding box.

Readers may zoom, resize the reading pane, move between pages, and return later. An annotation must therefore keep page-relative geometry rather than coordinates from one particular browser viewport.

The quick brown fox jumps over the lazy dog while a longer research sentence continues through a line wrap to make underlines, highlights, and strikethrough annotations easy to inspect.

Long-form selection fixture â section 8

Page 8 of 24 - Reeda Test Fixture

This dense, multi-page fixture is intentionally ordinary prose. It exercises selections across several visual lines, varying widths, page boundaries, and repeated text fragments without relying on a single bounding box.

Readers may zoom, resize the reading pane, move between pages, and return later. An annotation must therefore keep page-relative geometry rather than coordinates from one particular browser viewport.

The quick brown fox jumps over the lazy dog while a longer research sentence continues through a line wrap to make underlines, highlights, and strikethrough annotations easy to inspect.

Long-form selection fixture â section 9

Page 9 of 24 - Reeda Test Fixture

This dense, multi-page fixture is intentionally ordinary prose. It exercises selections across several visual lines, varying widths, page boundaries, and repeated text fragments without relying on a single bounding box.

Readers may zoom, resize the reading pane, move between pages, and return later. An annotation must therefore keep page-relative geometry rather than coordinates from one particular browser viewport.

The quick brown fox jumps over the lazy dog while a longer research sentence continues through a line wrap to make underlines, highlights, and strikethrough annotations easy to inspect.

Long-form selection fixture & section 10

Page 10 of 24 - Reeda Test Fixture

This dense, multi-page fixture is intentionally ordinary prose. It exercises selections across several visual lines, varying widths, page boundaries, and repeated text fragments without relying on a single bounding box.

Readers may zoom, resize the reading pane, move between pages, and return later. An annotation must therefore keep page-relative geometry rather than coordinates from one particular browser viewport.

The quick brown fox jumps over the lazy dog while a longer research sentence continues through a line wrap to make underlines, highlights, and strikethrough annotations easy to inspect.

Long-form selection fixture & section 11

Page 11 of 24 - Reeda Test Fixture

This dense, multi-page fixture is intentionally ordinary prose. It exercises selections across several visual lines, varying widths, page boundaries, and repeated text fragments without relying on a single bounding box.

Readers may zoom, resize the reading pane, move between pages, and return later. An annotation must therefore keep page-relative geometry rather than coordinates from one particular browser viewport.

The quick brown fox jumps over the lazy dog while a longer research sentence continues through a line wrap to make underlines, highlights, and strikethrough annotations easy to inspect.

Long-form selection fixture & section 12

Page 12 of 24 - Reeda Test Fixture

This dense, multi-page fixture is intentionally ordinary prose. It exercises selections across several visual lines, varying widths, page boundaries, and repeated text fragments without relying on a single bounding box.

Readers may zoom, resize the reading pane, move between pages, and return later. An annotation must therefore keep page-relative geometry rather than coordinates from one particular browser viewport.

The quick brown fox jumps over the lazy dog while a longer research sentence continues through a line wrap to make underlines, highlights, and strikethrough annotations easy to inspect.

Long-form selection fixture â section 13

Page 13 of 24 - Reeda Test Fixture

This dense, multi-page fixture is intentionally ordinary prose. It exercises selections across several visual lines, varying widths, page boundaries, and repeated text fragments without relying on a single bounding box.

Readers may zoom, resize the reading pane, move between pages, and return later. An annotation must therefore keep page-relative geometry rather than coordinates from one particular browser viewport.

The quick brown fox jumps over the lazy dog while a longer research sentence continues through a line wrap to make underlines, highlights, and strikethrough annotations easy to inspect.

Long-form selection fixture â section 14

Page 14 of 24 - Reeda Test Fixture

This dense, multi-page fixture is intentionally ordinary prose. It exercises selections across several visual lines, varying widths, page boundaries, and repeated text fragments without relying on a single bounding box.

Readers may zoom, resize the reading pane, move between pages, and return later. An annotation must therefore keep page-relative geometry rather than coordinates from one particular browser viewport.

The quick brown fox jumps over the lazy dog while a longer research sentence continues through a line wrap to make underlines, highlights, and strikethrough annotations easy to inspect.

Long-form selection fixture & section 15

Page 15 of 24 - Reeda Test Fixture

This dense, multi-page fixture is intentionally ordinary prose. It exercises selections across several visual lines, varying widths, page boundaries, and repeated text fragments without relying on a single bounding box.

Readers may zoom, resize the reading pane, move between pages, and return later. An annotation must therefore keep page-relative geometry rather than coordinates from one particular browser viewport.

The quick brown fox jumps over the lazy dog while a longer research sentence continues through a line wrap to make underlines, highlights, and strikethrough annotations easy to inspect.

Long-form selection fixture & section 16

Page 16 of 24 - Reeda Test Fixture

This dense, multi-page fixture is intentionally ordinary prose. It exercises selections across several visual lines, varying widths, page boundaries, and repeated text fragments without relying on a single bounding box.

Readers may zoom, resize the reading pane, move between pages, and return later. An annotation must therefore keep page-relative geometry rather than coordinates from one particular browser viewport.

The quick brown fox jumps over the lazy dog while a longer research sentence continues through a line wrap to make underlines, highlights, and strikethrough annotations easy to inspect.

Long-form selection fixture & section 17

Page 17 of 24 - Reeda Test Fixture

This dense, multi-page fixture is intentionally ordinary prose. It exercises selections across several visual lines, varying widths, page boundaries, and repeated text fragments without relying on a single bounding box.

Readers may zoom, resize the reading pane, move between pages, and return later. An annotation must therefore keep page-relative geometry rather than coordinates from one particular browser viewport.

The quick brown fox jumps over the lazy dog while a longer research sentence continues through a line wrap to make underlines, highlights, and strikethrough annotations easy to inspect.

Long-form selection fixture â section 18

Page 18 of 24 - Reeda Test Fixture

This dense, multi-page fixture is intentionally ordinary prose. It exercises selections across several visual lines, varying widths, page boundaries, and repeated text fragments without relying on a single bounding box.

Readers may zoom, resize the reading pane, move between pages, and return later. An annotation must therefore keep page-relative geometry rather than coordinates from one particular browser viewport.

The quick brown fox jumps over the lazy dog while a longer research sentence continues through a line wrap to make underlines, highlights, and strikethrough annotations easy to inspect.

Long-form selection fixture â section 19

Page 19 of 24 - Reeda Test Fixture

This dense, multi-page fixture is intentionally ordinary prose. It exercises selections across several visual lines, varying widths, page boundaries, and repeated text fragments without relying on a single bounding box.

Readers may zoom, resize the reading pane, move between pages, and return later. An annotation must therefore keep page-relative geometry rather than coordinates from one particular browser viewport.

The quick brown fox jumps over the lazy dog while a longer research sentence continues through a line wrap to make underlines, highlights, and strikethrough annotations easy to inspect.

Long-form selection fixture â section 20

Page 20 of 24 - Reeda Test Fixture

This dense, multi-page fixture is intentionally ordinary prose. It exercises selections across several visual lines, varying widths, page boundaries, and repeated text fragments without relying on a single bounding box.

Readers may zoom, resize the reading pane, move between pages, and return later. An annotation must therefore keep page-relative geometry rather than coordinates from one particular browser viewport.

The quick brown fox jumps over the lazy dog while a longer research sentence continues through a line wrap to make underlines, highlights, and strikethrough annotations easy to inspect.

Long-form selection fixture â section 21

Page 21 of 24 - Reeda Test Fixture

This dense, multi-page fixture is intentionally ordinary prose. It exercises selections across several visual lines, varying widths, page boundaries, and repeated text fragments without relying on a single bounding box.

Readers may zoom, resize the reading pane, move between pages, and return later. An annotation must therefore keep page-relative geometry rather than coordinates from one particular browser viewport.

The quick brown fox jumps over the lazy dog while a longer research sentence continues through a line wrap to make underlines, highlights, and strikethrough annotations easy to inspect.

Long-form selection fixture â section 22

Page 22 of 24 - Reeda Test Fixture

This dense, multi-page fixture is intentionally ordinary prose. It exercises selections across several visual lines, varying widths, page boundaries, and repeated text fragments without relying on a single bounding box.

Readers may zoom, resize the reading pane, move between pages, and return later. An annotation must therefore keep page-relative geometry rather than coordinates from one particular browser viewport.

The quick brown fox jumps over the lazy dog while a longer research sentence continues through a line wrap to make underlines, highlights, and strikethrough annotations easy to inspect.

Long-form selection fixture â section 23

Page 23 of 24 - Reeda Test Fixture

This dense, multi-page fixture is intentionally ordinary prose. It exercises selections across several visual lines, varying widths, page boundaries, and repeated text fragments without relying on a single bounding box.

Readers may zoom, resize the reading pane, move between pages, and return later. An annotation must therefore keep page-relative geometry rather than coordinates from one particular browser viewport.

The quick brown fox jumps over the lazy dog while a longer research sentence continues through a line wrap to make underlines, highlights, and strikethrough annotations easy to inspect.

Long-form selection fixture â section 24

Page 24 of 24 - Reeda Test Fixture

This dense, multi-page fixture is intentionally ordinary prose. It exercises selections across several visual lines, varying widths, page boundaries, and repeated text fragments without relying on a single bounding box.

Readers may zoom, resize the reading pane, move between pages, and return later. An annotation must therefore keep page-relative geometry rather than coordinates from one particular browser viewport.
