

Reeda Reading Experience - System Design

Page 1 of 3 - Reeda Test Fixture

Welcome to the Reeda reading environment. This document is a test fixture designed to verify page rendering, typography, text selection, and in-document search.

Reeda focuses on deep work with text documents and research papers. It provides an uncluttered interface without visual noise, floating cards, or excessive decorative elements.

The reading surface supports continuous scrolling, high-DPI canvas rendering, and selectable text layers for copying citations directly into your notes workspace.

In-Document Text Search and Match Navigation

Page 2 of 3 - Reeda Test Fixture

The search subsystem scans every page in the loaded document and highlights exact word matches on the active text layer.

Use Ctrl+F (or Cmd+F on macOS) to open the search bar. You can navigate between occurrences with the next and previous match buttons or with Enter and Shift+Enter.

Try searching for terms such as 'workspace', 'typography', 'rendering', or 'notes' to test live text layer highlighting across multiple pages.

Side-by-Side Notes Workspace and Divider

Page 3 of 3 - Reeda Test Fixture

The notes workspace allows readers to write, synthesize ideas, and format findings while keeping the source PDF immediately in view.

The horizontal divider between the PDF and the notes panes can be grabbed and dragged continuously to adjust pane proportions to your reading or writing preference.

You can also select any sentence from the PDF and click the floating Add to notes button to insert the excerpt directly into your notes editor.
